

## **User's manual**

### **1. Operating of fridge/freezer**

#### *Fridge operating on 12V*

- ✓ Ensure fridge is connected to 12V socket (Hela socket or Brad Harrison) found in front box next to fridge tray.
- ✓ Ensure 12V master switch on power panel is switched on.
- ✓ Ensure the batteries are charged and that the power panel displays a voltage above 12.5V.
- ✓ Switch fridge on according to fridge manufacturing manual.

#### *Fridge operating on 220V*

- ✓ Ensure trailer is connected to a 229V main power source
- ✓ Ensure fridge is connected to wall socket in front box next to fridge tray and wall socket is switched on.
- ✓ Switch fridge on according to fridge manufacturing manual.

Most fridges will automatically switch from 12V to 220V as soon as the 220V system is active in the trailer. In order to ensure longer lasting battery power, limit the opening of the fridge/freezer as much as possible.
